Summary

Full-stack Software Engineer with 1.5+ years of experience shipping Java/Spring Boot microservices and React/TypeScript front ends for large government data platforms, with 1,300+ commits on a 50+ engineer codebase. I also build AI tooling: a multi-agent pipeline on the Claude Agent SDK that turns a spec into tested code behind hard review gates and verifies the result in a real browser. I read code critically, debug systematically, and explain trade-offs clearly in writing, which is the work of evaluating and improving AI-generated code.

Experience

FPT-IS Hanoi, Vietnam
Fullstack Developer 02/2025 – Present

Business statistics platform for a national statistics agency (02/2025 – 06/2026)

- Full-stack developer on a 50+ engineer team: 1,270+ non-merge commits (917 front end, 354 back end); one of the top four front-end contributors.
- Shipped 800+ merge requests through the team's GitLab merge-request workflow.
- Back end: Java 21, Spring Boot 3.5 and Spring Cloud microservices in a Maven multi-module build, with SQL Server, Redis, Kafka, MinIO, Consul service discovery and config, and Keycloak OAuth2/JWT.
- Front end: React 18 + TypeScript in a pnpm monorepo with Vite, Ant Design, Redux, Form.io dynamic survey forms and real-time updates over STOMP/SockJS.
- Delivery: GitLab CI pipelines (validate → test with JUnit reports and coverage → build) and Kubernetes deployments.

Statistical microdata platform: metadata registry and microdata hub (07/2026 – Present)

- Top committer on both back end and front end since joining the project.
- Back end: Java 25, Spring Boot 4 and Spring Modulith modules (approval flow, auth, category, organization, user), with Micrometer tracing, Redis, MinIO, Consul and Keycloak.
- Front end: React 19 + TypeScript with UmiJS Max, Ant Design 6 + ProComponents, TanStack Query and Tailwind, plus Keycloak SSO.
- Wrote AI coding-assistant guidelines for statistical metadata standards (DDI-L 3.3, GSIM 2.0, GSBPM 5.2), statistical disclosure control and access control, so that AI-generated code follows the domain rules.

Projects

aidev (claude-sdlc-agents): multi-agent software-engineering pipeline 08/2026 – Present

Local CLI and web UI on the Claude Agent SDK: takes a Markdown spec and a target repo, gets the design reviewed, implements it, and verifies it in a real browser.

- Pipeline: Orchestrator ↔ Spec & Architecture review (approve / amend / reject, max 3 rounds) → task breakdown → coding with unit tests → Playwright E2E/QA, with failures looping back to coding. Direct SDK query() calls give every stage a hard approval gate; a failed run exits non-zero with the reason instead of reporting false success.
- Safety: read-only reference repos enforced by canUseTool path checks, no git access, DB connection strings never logged, localhost-only UI.

- Resumable checkpoints per stage; clone mode ports features between repos with deterministic (no-LLM) coverage and wiring checks.
- Raised test coverage from 30% to 72% across 36 Vitest suites; per-stage token and cost tracking. *TypeScript, Node.js, Claude Agent SDK, Playwright, Vitest*

Tech Nova: full-stack e-commerce platform 02/2026 – 08/2026

Tech-store e-commerce site with catalog, cart, VNPay payments, an admin console, real-time statistics and chat. Sole developer, 81 commits.

- Microservices: Spring Cloud Gateway with reactive Redis, a core service and an S3-compatible file service (Java 21, Spring Boot 3.5).
- Keycloak OAuth2 resource server with Google login. VNPay payment signing with HMAC-SHA512. WebSocket/STOMP for live statistics and chat.
- React 19 + TypeScript + Vite PWA front end with Ant Design 6 and React Router 7.
- Local stack on Docker Compose (MySQL 8.4, Redis 7, MinIO, Keycloak). Deployed to Vercel (front end) and Render + Backblaze B2 (back end). JUnit tests for services, controllers and SQL contracts.

Skills

Languages

Java, TypeScript, JavaScript, SQL

Back end

Spring Boot 3/4, Spring Cloud Gateway, Spring Modulith, Node.js (Fastify, Express), REST, WebSocket/STOMP, Kafka

Front end

React 18/19, TypeScript, Vite, Ant Design, Redux, TanStack Query, UmiJS, Tailwind

Data

SQL Server, MySQL, PostgreSQL, Redis, MinIO / S3

Security

Keycloak, OAuth2 / OIDC, JWT, RBAC, HMAC request signing

AI / LLM

Claude Agent SDK, Gemini API / Veo, Vertex AI, Multi-agent orchestration, Prompt engineering, Claude Code / Cursor / Codex

Testing & Quality

Vitest, JUnit, Jest, Playwright E2E, Code review, Systematic debugging

DevOps

Docker, Kubernetes, Consul, GitLab CI, GitHub Actions, Vercel / Render

Education

Electric Power University Engineer's Degree

Software Engineering Hanoi, Vietnam • 2020 – 2025

Certifications

AI-Driven Software Development Life-Cycle 07/2026

SOICT, Hanoi University of Science and Technology

Languages

Vietnamese
